WHAT IS CENFORCE 120 MG?

Cenforce 120 mg contains Sildenafil Citrate, a PDE5 inhibitor that helps treat erectile dysfunction (ED) in adult men under medical supervision.

Key Facts:
- Generic Name: Sildenafil Citrate
- Drug Class: PDE5 Inhibitor
- Treats: Erectile Dysfunction

How it Works:

Sildenafil Citrate relaxes blood vessels and improves blood flow to support erectile function when sexual stimulation is present. Effects begin within 30–60 minutes and last 4–6 hours.

Strength: 120 mg
Sildenafil Citrate — clinically proven active ingredient for treating erectile dysfunction in adult men.

Form: Oral Tablet
Convenient oral tablet form, taken by mouth with water as directed by a healthcare provider.

Prescription Medicine
Available on prescription only. Always consult your doctor before use. Follow medical guidance strictly.

For Adult Men Only
Indicated exclusively for adult men. Not suitable for women, children, or adolescents under any circumstances.

HOW CENFORCE 120 MG WORKS

Mechanism of Action: Sildenafil Citrate works by inhibiting PDE5 enzyme, enhancing natural blood flow response during sexual stimulation. Works within 30–60 minutes. Effects last 4–6 hours.

STEP 1–2

Sexual Stimulation
Nitric oxide is released in penile tissue, triggering the natural physiological response cascade.

STEP 3–4

CGMP Levels Increase
Blood vessels in penile tissue relax and dilate, allowing increased blood circulation to the area.

STEP 5–6

Improved Blood Flow
Enhanced circulation enables a firm, sustained erection.
Note: requires sexual stimulation to activate.
